

AGA**FAMILIES REUNITED****RAYBURN****STANLEY™**

Stanley's plant in Waterford was set up in 1934 by Allied Ironfounders, the predecessor company to Aga, as a sister facility to its foundry in Larbert, Scotland. Stanley cookers had been launched alongside Rayburn cookers in the 1920s – both were companions to the Livingstone cooker.

Allied Ironfounders was the leading foundry company of the day. It owned two sites in Larbert – one producing Falcon commercial cookers (also an Aga Foodservice company) and Aga sites in Coalbrookdale and Telford (where Agas and Rayburns are produced today) together with the Waterford site (where Stanley was developed). It sourced from all of them and technical and production staff transferred readily between sites. Rayburns were made in Ireland until the 1950s and Agas were made in Scotland.

Iron Age family

In the 1960s Stanley was acquired by A H Masser Ironfounders. Two Masser employees were E W Campbell and A J Cooke who managed the Irish Aga agency and who subsequently acquired the agency themselves creating Campbell & Cooke, which is still the agent of Aga in Ireland. Campbell & Cooke's Managing Director is David Cooke, son of the founder and it is part of the Gowan Group.

In recent years the focus of Aga, Stanley and Rayburn has been on highlighting radiant heat and that range cooking makes "your house into a home." Aga's Iron Age family welcomes Stanley back home.

AGA, STANLEY & RAYBURN IN ONE GROUP
