

Efficiency Declaration For Solid Fuel Roomheaters

The gross efficiency of Waterford Stanley solid fuel room heaters has been measured as specified in BS EN 13240:2001 + Amd 2:2004 Roomheaters fired by solid fuel Requirements and test methods.

The gross calorific value of the fuel has been used for this efficiency calculation and the results for each stove model can be seen in the attached certificates. The test data from which it has been calculated has been certified by notified testing laboratory No. 0558 under the Construction Products Directive.

The efficiency value may be used in the Dwelling Energy Assessment Procedure for building energy rating of dwellings in the Republic of Ireland.

Signed on behalf of Waterford Stanley,

Michael Stack
Technical director
